Editorial Preface

Selected contributions to the 2015 NASA/MSFC Science and Technology Jamboree

This special section of Results in Physics is a selection of contributed talks to the 2015 NASA Marshall Space Flight Center (MSFC) Science Jamboree. This is an annual event during which short talks focused on NASA MSFC science, technology, and engineering subjects currently being pursued are presented. This inaugural edition includes topics such as solar observations, magnetospheric physics, material science, terrestrial weather, and propulsion technology.

The NASA MSFC Science & Technology Jamboree has grown over the years and drawn interest in the larger local technical community that includes academic and industry institutions. It is the expectation that a larger, more diverse Special Section, or perhaps Special Issue, will be published in Results in Physics associated with the 2016 NASA MSFC Science and Technology Jamboree. Future topics will range from gravitational waves, to space weather, to Mars transportation. Stay tuned.

We are confident that the topics presented are of interest and offer the opportunity for NASA MSFC to (1) share areas of interest with a broader scientific community, (2) spark productive and insightful discussions, and (3) foster partnerships for future endeavors.
